

# INSTALLATION GUIDE

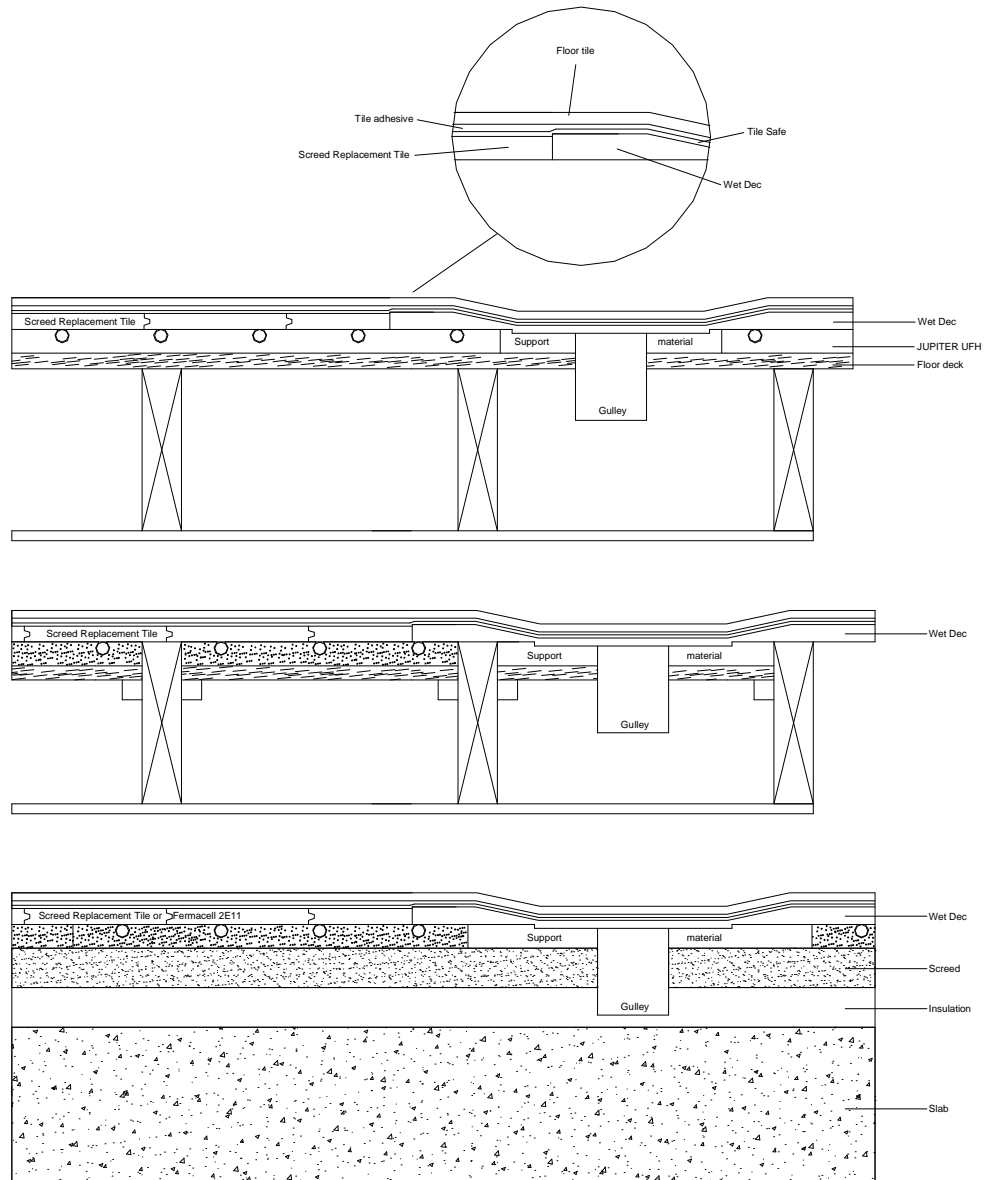

## Floor construction Wet room solution

Creating a problem free wet room solution, especially on a suspended floor, can present problems at both design stage and in execution. The combination of under floor heating and wet room floors has traditionally required a sculpted screed to be installed over the heating pipes. In conjunction with CCL Wet Room Solutions, Jupiter have developed a reliable 'dry' installed panel system that has an integral fall to either a round or linear gully that sits side by side with their non screed solutions.

The section drawings below illustrate 3 possible solutions, a wetroom solution above a suspended floor, a wetroom within a suspended floor and a wetroom solution on a solid floor i.e. concrete or beam & block.

More advice and assistance can be obtained from JUPITER or from CCL on 01256 763100.
